
Amazon Quick One-Day Mastery

From Intelligent Insights to Business Productivity

Duration	Full day, 6.5 hours (including 3 hands-on labs)
Target Audience	Sales, HR, Operations, Finance, IT and other business users; no coding
Delivery Format	Lecture + Live Demo + Hands-on LAB
Language	English

Amazon Web Services

Course Objectives

Upon completing this course, learners will be able to:

- Articulate Amazon Quick's product positioning and core capabilities, and understand its fundamental differences from traditional BI tools and general-purpose AI
- Complete 3 types of core tasks hands-on: obtain insights using natural language, build automated workflows, and create custom AI assistants
- Make informed decisions: choose the right Quick capability (Chat / Research / Flows / Automate / Agent / Apps) for their own business scenarios
- Take away deliverables: each learner leaves the course with at least one usable Agent or App

Course Structure

Module	Topic	Duration	Format
Module 1	AI Reshaping Work + What is Amazon Quick	35 min	Lecture
Module 2	Instant Insights	70 min	Lecture + Demo
LAB 1	Hands-on: Instant Insights	40 min	Lab
Module 3	Process Automation	60 min	Lecture + Demo
LAB 2	Hands-on: Process Automation	40 min	Lab
Module 4	Intelligent Empowerment	60 min	Lecture + Demo
LAB 3	Hands-on: Intelligent Empowerment	40 min	Lab
Module 5	Security & Trust + ROI Assessment + Go-Live Plan	45 min	Lecture + Discussion

Module 1: AI Reshaping Work + What is Amazon Quick (35 min)

Core Content:

- Industry data: The AI Agent era has arrived — early adopters are reaping the rewards
- Four enterprise pain points: time-consuming information search, inefficient tool-switching, data silos, insights failing to translate into action
- Amazon Quick positioning: An AI work assistant that connects "Question → Answer → Action → Outcome"
- Three product promises: Deep personalization / Transforming how you work / Trustworthy AI
- Core integration capabilities overview: Quick Sight, Quick Research, Quick Flows, Quick Automate, Quick Index, Quick Apps
- Full-day learning path and capability maturity matrix

Module 2: Instant Insights (70 min)

Problem Addressed: Information is scattered, slow to obtain, and requires specialized skills to analyze

Core Capabilities:

- Chat + Spaces — Consolidate enterprise documents, dashboards, and data sources into a shared team knowledge hub; ask questions in natural language and get structured answers grounded in enterprise data with source citations
- Quick Research — Compress weeks of research into minutes; multi-Agent parallel execution integrating internal data + public internet + professional datasets
- Analyses (Natural Language Data Queries) — No SQL required; generate interactive visualizations with natural language; supports anomaly detection, trend forecasting, and What-if scenario analysis
- Document & Visualization Creation — Generate Word, Excel, PowerPoint, PDF through conversation; push directly to Microsoft 365

Customer Case Study: Principal Financial Group — Complex research projects compressed from weeks to under 1 week

LAB 1 (40 min): Learners use fictional company Acme Corp's customer data to complete the full workflow: Space creation, Chat Q&A, and Research report generation

Module 3: Process Automation (60 min)

Problem Addressed: Repetitive work consumes significant time; a gap exists between insights and action

Core Capabilities:

- Quick Flows — Describe workflows in natural language, AI builds them automatically; 40+ integrations (Slack, Outlook, Salesforce, Jira, ServiceNow, SharePoint, etc.); includes UI Agent: operates browsers like a human, no API required
- Quick Automate — Enterprise-grade complex process orchestration supporting multi-branch, multi-system, and human approval nodes; Visual Designer + Planner Agent converts process documentation directly into executable workflows; real-time monitoring and audit trails
- Desktop Scheduled Tasks — Autonomous scheduled Agents running in the background on local machines; define goals in natural language, configuration done in 30 seconds
- Flows vs Automate vs Scheduled Task Selection Guide: The course provides a scenario-based decision framework for all three

Customer Case Study: Jabil (Global Manufacturing) — Quick Automate optimized accounts collection and RFQ processes, saving ~\$400,000/year with 10% scrap reduction

LAB 2 (40 min): Learners build a Quick Flow, configure a Desktop Scheduled Task, and complete a three-scenario decision exercise

Module 4: Intelligent Empowerment (60 min)

Problem Addressed: Individual knowledge cannot be reused by the team; experts are repeatedly interrupted

Core Capabilities:

- Chat Agent Builder — Configure custom AI assistant roles, data scope, and behavior rules using natural language; bind to Space knowledge bases for domain-focused answers; one-click team sharing — one person builds, everyone benefits
- Quick Apps — Describe requirements in natural language, AI generates runnable web applications in real-time; workflow: Describe → Generate → Preview → Iterate → One-click publish; no coding required, supports embedded dashboards, enterprise system connections, and built-in AI reasoning
- Desktop Skills + MCP — 19 built-in skill packs (PPT generation, Word docs, web automation, image generation, etc.) loaded on demand; MCP (Model Context Protocol) open protocol: connect any external tool, not locked to official integration lists

Customer Case Study: Vertiv — Built enterprise AI platform VeGA on Amazon Quick Suite, serving thousands of internal users, planning 25%+ user expansion in 2026

LAB 3 (40 min): Learners build a custom Chat Agent and generate a publishable Quick App using natural language

Module 5: Security & Trust + ROI Assessment + Go-Live Plan (45 min)

Security & Trust:

- Data never trains models; data never leaves the customer's AWS environment; every interaction is auditable
- Compliance certifications: HIPAA / FedRAMP / SOC 2 / ISO 27001 / PCI DSS

ROI Assessment:

- Learners calculate their team's ROI estimate on-site (team size × time saved × hourly rate)
- Reference example: 100-person team, ~\$500,000 annual savings, ~18.5x ROI

Pricing Overview: Free / Plus / Professional / Enterprise; 30-day free trial, no AWS account required to get started

Go-Live Plan:

-
- Each learner writes specific action commitments for 7 / 30 / 90 days
 - Instructor initiates an online review after 30 days to follow up on implementation progress

Learner Outcomes

Outcome	Description
Ready-to-use Deliverables	Leave with at least 1 Agent and 1 App, usable at work the same day
Decision Framework	Master the scenario selection logic for Chat / Research / Flows / Automate / Agent / Apps
Action Plan	Complete a personal go-live plan with a clear first action within 7 days
Lab Materials	Receive the complete LAB materials package (fictional Acme Corp scenario documents)
Learner Handbook	Receive a course handbook including UI operation cards, troubleshooting guides, and self-assessment

Target Audience

Role	Value from This Course
Sales	Generate client visit briefs in 5 min, automate CRM updates, build a sales advisor Agent
HR	Automate onboarding processes, build an employee Q&A; Agent, generate recruiting analytics reports
Operations / Supply Chain	Automate repetitive coordination, build cross-system workflows, monitor anomalies in real-time
Finance	Query data in natural language, auto-generate executive summaries, scenario analysis
IT	Automate ticket routing, connect internal systems via MCP, build an IT support Agent
Leadership	Automate daily business briefings, strategic goal tracking dashboards, ROI self-assessment
